WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A 4 mm rod 7 mm long with a 6 mm flange 1 mm thick, 3 mm from its outer end; a 3 mm pocket 2.5 deep in its inner end.

Print standing on its outer end, 100 % infill, so light runs along it.

Fit: push it through the 4.4 mm hole from inside the front shell until the flange sits on the inner face; it stands 1 mm proud outside. A drop of clear adhesive on the flange holds it.

Push the 3 mm red LED into the pocket; a drop of adhesive.

Check: the LED lit by a 3 V coin cell shows clearly outside.
